UC Names BME Student Emily Condra the Engineer of the Month for February

Twelve leading junior or senior engineering students are chosen each year in the College of Engineering and Applied Science as the Engineer of the Month. February’s pick was biomedical engineering major Emily Condra. The criteria for this award include demonstrated excellence in the classroom, success in co-op assignments, and leadership through extracurricular activities on campus and/or in the community. Condra is studying biomedical engineering in the ACCEND program which will allow her to earn a bachelor’s and a master’s degree simultaneously in five years. Condra has also been involved on campus, participating in the Society of Women Engineers—in which she serves as community service co-chair. She has had five successful co-op experiences however it may be that one of the highlights of her time at UC has been her capstone project. This project led to a working prototype that is in the application process for a patent. Congratulations to Emily for these outstanding accomplishments and for her award of Engineer of the Month! https://ceas.uc.edu/eom14-15/eomfeb15.html
