

## Dr. David Wendell and group travel to Lord Howe Island

**Dr. David Wendell** was awarded a

National Science Foundation EAGER

Award to help protect the surrounding

reefs of Lord Howe Island. This island is a volcanic remnant located

between Australia and New Zealand. Its surrounding waters are home to

many unique animals found nowhere else in the world and UNESCO has

identified it as a “World Heritage Site of global natural significance”. Dr.

Wendell’s group will study the flow of wastewater from island septic tanks

and ultimately hopes to assist in the renovation of the community’s

wastewater treatment
