

GRADUATE HANDBOOK

**Department of Biomedical Engineering
College of Engineering and Applied Science
University of Cincinnati**

2020/2021

Updated August 2020

Dear BME Graduate Students,

Welcome to the Graduate Program of the Department of Biomedical Engineering (BME) at the University of Cincinnati. Our diverse faculty members are internationally recognized researchers with collaborative relationships that span disciplines in engineering and medicine. We have unique strengths in medical device, medical imaging, and tissue engineering and biomechanics. Our Graduate Committee has conducted a rigorous evaluation process in selecting you to join a superb group of graduate students in these technical focus areas. The size of our graduate program is small enough to enable one-on-one mentoring by your research advisor. The curriculum is focused, yet flexible enough to permit students with pre-existing strengths to concentrate on areas requiring development. The facilities in the College of Engineering and Applied Science are excellent.

The BME graduate program is based on a firm commitment to academic excellence, tempered by kindness and compassion. We are an advocate for the graduate student. However, in order to maintain a reputation for quality, which will enhance your employment opportunities and increase the value of your degree/s, we are also required to set and enforce academic policies.

This handbook is designed to meet several needs. In Chapters One and Two, we describe the application and admission process as well as registration procedures. Chapter Three highlights the graduate credit requirements and grading policies. The MEng (Chapter Four), Master's (Chapter Five) and Doctoral Degree (Chapter Six) Programs are also described in detail, including course requirements, minimum academic performance expected, and the Ph.D. Qualifying Exam and thesis and dissertation proposals and defense. In addition, BME also participates in the MD/PhD Medical Scientist Training Program (MSTP) from College of Medicine, which is also described in Chapter Six. The handbook concludes with Special Rules and Provisions. In addition to the Graduate School Handbook, which can be found in the UC web site ([Graduate School handbook](#)), we encourage you to become familiar with the entire document as it provides valuable information as you proceed through your program of study, which is individualized.

We trust that you will be successful in your pursuit of a graduate degree and that you will have valuable experiences while you are at UC. Your progress through the graduate program will provide the necessary foundation for a successful career in academia, industry, or medicine.

Kind regards,

Jing-Huei Lee, Ph.D.
Professor
Director of Graduate Studies

Fax: (513) 556-3473

PREFACE

All graduate students in the BME program should familiarize themselves with the contents of this document and the latest version if applicable. Most questions will be answered and difficulties will be avoided. It is recommended that graduate students retain the handbook for their personal use throughout their degree program. All students are expected to be thoroughly aware of, and conform to, all the requirements and regulations of the graduate Biomedical Engineering program. Students are expected to follow guidelines from the handbook published at the time of their admission to the BME program, but if there are discrepancies, students also have the option to follow the most recent version of the guidelines which can be found on the BME web site: [BME graduate handbook](#), and if so, must inform the BME Graduate Director and Coordinator of their choice.

Chapter One Application and Admission

Application Process

All applications to the University of Cincinnati Graduate Program should refer to the web site [Graduate School website for application process](#).

Application Materials

Materials should be uploaded to the online web site, [Catalyst](#), following the instructions provided.

You must submit the following

- [Transcripts](#) – Official transcript from every university attended for undergraduate and graduate coursework
- [Application Fee](#) – The application fee must be paid on-line at the time of the application with a credit card (Visa, MasterCard, or Discover) or electronic check. The application fee is \$75.00 for domestic students and \$80.00 for international students.
- [Letters of Recommendation](#) – Two letters of recommendation are required. It is optional to submit more than two. All letters submitted will be reviewed.
- [Official Standardized Test Scores](#)
 - GRE – This is required by all applicants (for MEng, see below) and must be submitted electronically to UC. [The average scores accepted for the GRE test are about: 155 Quantitative, 155 Verbal and 3.5 Analytical Writing](#). The University code for GRE is 1833, a department code is not required. For testing information please go to [ETS website for GRE information](#).
 - International students must also submit proof of English language proficiency (See below).

Admission Requirements for BME program

- BS or MS in Engineering, Material Science, Biology, Computer Science, Physical Science (physics or chemistry) or other science-related majors*.
- GRE score of 150 or higher (on both the verbal and quantitative sections); 3.0 or higher (analytical writing) **
- 3.0 minimum grade point average (based on 4.0 scale)
- [Admissions FAQ](#) can be found in the website ([Graduate School admission FAQ page](#))

**Admission to the MEng Program requires a BS in Engineering, Material Science, Computer Science, or Physics.*

***GRE Score is waived for MEng applicants who have an undergraduate engineering degree from an ABET accredited US university and have a GPA of 3.0 or higher. GRE scores are mandatory for applicants from outside the US.*

English requirements for international students:

Demonstration of English proficiency is required for students whose native language is not English. Most students fulfill the English requirement by taking the Test of English as a Foreign Language (TOEFL), the International English Testing System (IELTS), or the PEARSON Test of English (PTE). All test scores are valid for up to two years. This is required of all international applicants whose native language is not English – including those with F-1 visas and green cards.

International students are automatically exempted from the English Proficiency testing requirement if they have received a baccalaureate or higher degree from a country where English is the official language.

For IELTS an overall band score of 7.0 is required. For PEARSON a score of 50 is required.

TOEFL –The TOEFL requirement may be waived for applicants with degrees (Bachelors or MS) earned in English from accredited universities and colleges from countries where English is the official language (The list of the countries can be found in UC Graduate Handbook). The minimum TOEFL score accepted, Internet based, is 92 for BME program. **The University of Cincinnati institutional code for TOEFL is 1833.** A department code is not required.

If electronic scores are not received, we will not consider your application package complete and will not be able to offer you admission to UC.

You may submit your application before taking the necessary standardized tests. Be sure to have official scores of your standardized tests sent directly to UC – institutional code 1833, once you take the exam. It can take up to six weeks for UC to receive the official results and this can delay your total application package being received in time.

TSE (Test of Spoken English) – We do not require TSE, and will not use it as a replacement for TOEFL.

Admission Application Deadlines

The deadline for applications is **December 31st** for applicants that want to be considered for financial aid for Fall admission. The final deadline for Fall admission is March 31st. Applications received between December 31st and March 31st may be considered for financial aid if funding is still available. The current policy of the BME Graduate Studies Office is Fall semester admission only. However, we may also accept Spring admission for special circumstances, which are reviewed on a case-by-case basis.

Admission

The terms and conditions of financial aid will be stated in your offer letter.

Financial aid

There are five types of financial aid.

- Graduate Incentive Award (GIA)
This is a scholarship that covers a major portion of tuition costs for the student.
- Research Assistantship (RA)
This is an assistantship that provides a monthly stipend to provide research assistance to professors.

- Teaching Assistantship (TA)
This is an assistantship that provides a monthly stipend to provide teaching assistance to professors.
- Graduate Assistantships (GA)
This is an assistantship that provides a monthly stipend to provide research, teaching or departmental duties.
- BME Outstanding Scholarship (BOS)
This is a scholarship for outstanding students recruited to the BME program. This highly competitive scholarship will offer a full tuition and additional stipends to cover other fees for the first year. The continuing of BOS after the first year depends on student's performance and his/her advisor's research funding. These outstanding students are expected to submit a F30/F31 training grant to NIH, or an equivalent grant to another agency, by the end of their second year.

Financial aid is not normally terminated during the period for which it has been granted. However, for serious reasons such as poor academic performance (e.g., less than 3.0 GPA), teaching or research duties, or moral turpitude, a dismissal hearing by the Graduate Committee may be convened. If the dismissal hearing warrants it, the Graduate Program Director may terminate a student's support prematurely.

Transfer Credits

As a means of assuring that the character and standards embodied in graduate degrees awarded by the University of Cincinnati are preserved, limits are set on the amount of work completed at other institutions which can be included as fulfilling graduate degree requirements. Transferring credits from other universities is subject to the approval of the Director of BME Graduate Studies. Limits are as follows:

Master of Engineering Degrees (MEng)

The minimum requirement for this degree is one academic year of full-time graduate study, or its equivalent. Eligibility for graduation requires a minimum of **thirty (30)** graduate credits, the latter half (or 15) of which must be completed while in residence at the University of Cincinnati. The capstone project is three-six (3-6) credits. No thesis is required for this degree. Unless otherwise specified in the MOU between UC and the student's previous institution, a student with previous graduate work at another institution that has not been used towards a degree may petition the Graduate Program Director to transfer up to **nine (9)** semester credit hours of relevant course work with grades of 'B' or better.

Master of Science Degrees (MS)

The minimum requirement for this degree is one academic year of full-time graduate study, or its equivalent. Eligibility for graduation requires a minimum of **thirty (30)** graduate credits, the latter half (or 15) of which must be completed while in residence at the University of Cincinnati. The M.S. thesis is **nine (9)** credits. A student who has previous graduate work at another institution that has not been used towards a degree may petition the Graduate Program Director to transfer up to **six (6)** semester credit hours of relevant course work with grades of 'B' or better.

Doctoral Degrees (PhD)

This degree is conferred on the basis of extensive study and high scholarly attainment in a special field of learning. In no case, however, will the degree be granted for less than three years of full-time graduate study or its equivalent, of which the last year must be in residence at the University of Cincinnati or under the University's direction. Eligibility for graduation requires a minimum of 90 graduate credits, the last 30 of which, inclusive of research credits (max. 15), must be completed at the University of Cincinnati. A student who enters the program with a MS degree may be credited with a maximum of 30 credits. In addition, a maximum of 10 research credits can also be transferred.

PhD Degrees in the MSTP program

This degree is offered by BME with the cooperation of the Medical Scientist Training Program (MSTP) from the College of Medicine ([Medical Scientist Training Program information](#)). PhD students typically complete their first two years of medical school and then shift their study to graduate school training in one of the UC graduate programs (e.g. BME program). Upon successful completion of a PhD dissertation, students then return to medical school and complete their final two years of clinical training. With approval of the MSTP program director, this path may be modified under special circumstances. The requirements for a PhD degree for students undergoing the MD/PhD route are essentially the same.

Chapter Two Registration and Policies

A graduate student must be registered in the UC Graduate Division in order to earn graduate credit. However, unclassified students may be eligible to apply specific course credits towards their degree if later admitted into the Graduate Program.

All full-time students receiving GIA should register for at least 15 credit hours each semester (fall and spring) except for summer semester. Students do not need to register for summer semester if not taking summer courses. The 15-credit-hour policy applies to students funded on grants or other funding (e.g. UGA, URA, and UTA). However, students that are not supported by grants or other funding, have completed all required course work, and have the required number of research/thesis/dissertation hours can register for one credit hour each academic year, or one credit hour for Fall/Spring semesters if using University facilities or resources. International students have to submit an online request for reduced course load, and must register for at least one credit hour for Fall and Spring semesters and also while on Curricular Practical Training (CPT) if authorized for CPT. There are two steps to this process:

- (1) submit a request for reduced course load on iBearcats ([link to iBearcats](#)) using Barbara Carter as the advisor name and email.
- (2) submit a request on iEngineering via the CEAS website ([link to iEngineering](#)). This is an official approval process to ensure that international students remain in status with their visa.

Registration and related issues should be referred to the information posted in the UC web site ([Office of the Registrar registration information](#)).

Leaves of Absence

Students may request a leave of absence from the program, for a period of up to one year. Assuming appropriate documentation is provided, the circumstances justifying a leave include but are not limited to personal or family medical conditions, call to active military duty, maternity leave, or death in immediate family. The rationale must be documented by the applicant. Such requests must be made in writing to the Director of BME Graduate Program and must be endorsed by the student's advisor. Additionally, a request for an official leave of absence must be approved by the Graduate School by submitting a Request for Leave of Absence form via the online Grad Tracker system. Instructions can be found at the following link: <http://grad.uc.edu/student-life/policies/forms.html>. The request will go to the Graduate School for review and final approval. If an official leave of absence is approved by the Graduate School, the time away will not count towards the student's time-to-degree. Upon return to the program the student's status will be the same as when he/she began the leave. Students, however, are cautioned that, if they had financial aid at the time of the leave, there is no guarantee that aid will be available when they resume their studies at the end of the leave.

Unofficial leaves of absence or vacations during the academic year may not be taken. Students who do so may have their financial aid withdrawn and/or may be placed on probation or dismissed from the program by the Graduate Program Director.

Under normal circumstances it is anticipated that students who request leave on the basis of maternity/paternity considerations will be granted up to 8 weeks continuous absence. During such leave, necessary registrations will be maintained, and the stipend will be paid for the 8-week duration of the leave; however, it is anticipated that students afforded such leave will take no additional vacation leave for the balance of the academic year. Under exceptional circumstances the 8-week period can be extended, but the Graduate Program Director must be informed and medical certificates of justification provided in such instances. In no case will stipend be paid for more than an 8-week period of absence. Requests for maternity/paternity leave must be made in writing to the Graduate Program Director.

Absenteeism Policy

For extended absence greater than two weeks, communication with your research advisor or the Graduate Program Director is imperative. Without such communication or establishment of an official request for a leave of absence, automatic dismissal from the BME graduate program will precede one month after a probationary letter is sent warning the student of extended absenteeism.

Chapter Three Graduate Credits and Grading Practices

Course Load

All MS and PhD students are expected to register for at least **fifteen (15)** graduate credit hours (courses at the 6000 level or above) per semester for Fall and Spring semesters for the first year and a half. BME students, if not taking summer courses, can maintain full-time status without registration in summer semester. The recommended course load is fifteen (15) graduate credit hours per semester.

Most International students, under the terms of their visas, must be enrolled as full-time students in all semesters (Fall and Spring).

Students who have received a GIA, RA or GA are required to register for fifteen (15) hours during the Fall and Spring semesters for the duration of the award.

The Ohio Board of Regents denies state subsidy for graduate students who have earned 174 or more graduate credit hours. Graduate students that have accumulated 174 or more graduate credit hours are not eligible for financial aid from general funds (GIA, TA and GA).

Graduate Credit

The CEAS has a five (5) year cooperative undergraduate program. Therefore, courses designated at the 1000 through 5000 levels are strictly undergraduate courses. Graduate courses in the CEAS are numbered at the 6000 level and above. Graduate courses in other Colleges may begin at the 5000 level. Students taking courses at the 5000 level or above from other UC colleges should verify that these courses will be counted toward their graduate degree.

Grading Practices

The BME program uses the grading practices specified in the Graduate Handbook of the UC Graduate School ([grading policy for graduate students](#)). If a student receives a grade of F in a course, the student must retake the course or its approved equivalent. Upon receiving a grade of A, B, or C after retaking the course, the F grade will remain on the student's record and will still be considered in calculating the student's grade point average.

Chapter Four Master of Engineering (MEng) Degree Program

The BME Program offers courses of study leading to the Master of Engineering (MEng) Degree in Biomedical Engineering. The MEng degree is distinguished from the Master of Science degree in that it is a practice-based Professional Master's degree with no research thesis requirement. Instead of a research thesis, students are required to complete a capstone project in an area of their interest. The MEng curriculum provides skills and expertise that enhance the individual's ability to contribute to the technical workforce. The degree is intended to provide professionals in the technical workforce an opportunity to continue their education and development in the context of an advanced degree. The MEng serves the practicing engineer to further his/her career in the context of an application of engineering knowledge, as opposed to a Master of Science degree in a research context, which is focused on discovering new knowledge.

BME MEng students must satisfy requirements of both the BME program, as described in this handbook, and the CEAS MEng program, as described in the College-level handbook, available from the site [Master of Engineering handbook](#). If an apparent contradiction between these requirements is perceived, students should follow the BME requirements, but should also inquire with the BME Graduate Program Director and MEng Advisor to resolve any questions.

Master of Engineering Curricular Requirements

Course	Semester Credit Hours
MEng Program Core Courses	4 – 8
BME Track Courses	10 – 15
BME-MEng Approved Technical Electives	6 – 9
BME-MEng Capstone Project	3 – 6
Total Graduate Credit Hours	30

Courses taken at Institutes under the quarter system will be counted toward the above curriculum requirements at a rate of 1.5 quarter hours per semester hour.

The individual curriculum outline (list of courses) for each focus area can be found in this section and in the Appendix of this Handbook.

Planning the BME-MEng Degree Curriculum and Program of Study

For the purposes of planning the MEng curriculum, students should rely on the MEng Curriculum Courses section in the Appendix of this Graduate Handbook as well as the UC OneStop web site to ensure that the courses are actually being offered for the semester under consideration.

MEng Core Courses - BME-MEng students are required to take a minimum of 2 “MEng Core” courses (one from the Project/Task Management category and one from the Professional Skills category) that are common to all MEng students within CEAS. The MEng Core courses provide skills in the effective practice of engineering recognizing that for experienced practitioners, effectiveness includes technical skills, project and task management skills, and interpersonal skills. These courses should be chosen from the list provided in this handbook (see MEng Curriculum Section) or from updated lists provided by the CEAS MEng office. Note that this course list is not comprehensive, and new courses can be petitioned on a case-by-case basis to be added to this pool of core courses.

BME-MEng Track Courses - MEng students in the BME track are required to take a minimum of 12 credit hours of BME coursework. These can be picked from the courses in all BME focus areas, and specifically any BMEXXX course at the graduate level (6000 or higher). This means that both “BME Core” and “BME

Focus Area” courses with a BME designation can be used as a MEng BME track Course (see Table 1 and the MEng Curriculum Courses section of the Appendix for further clarification).

BME-MEng Electives - BME MEng students need to complete a minimum of 2 elective courses (6 credit hours) as part of their MEng curriculum (refer to the MEng Curriculum section in the Appendix). These electives should provide breadth, depth, or interdisciplinary focus relevant to the student’s educational objectives. These can be graduate-level courses from any discipline, as long as they meet the students’ career goals and are approved by the BME MEng Program Advisor.

BME MEng Capstone - BME MEng Students are required to complete a capstone experience per CEAS MEng handbook requirements (3-6 credit hours). In BME, it is expected that the capstone will demonstrate applications of biomedical engineering skills and synthesis of knowledge acquired in course work. If additional capstone credit hours are taken above the 6 credit hours maximum, they do not count toward the student’s other course requirements. With the College MEng advisor’s approval, students can choose to: (1) complete a project, (2) perform an internship, or (3) prepare a written paper under the supervision of the capstone advisor. Please see the CEAS MEng handbook (included as an Appendix to this handbook) for guidelines on approval and reporting for all these capstone options.

- **Project** – A capstone project, performed with the supervision of UC faculty to be identified by the student, is focused on the application of principles and the practice of engineering and is not meant to be a mini-thesis. Capstone projects provide a mechanism to demonstrate a synthesis of knowledge and the application of advanced concepts learned in class to a specific problem. A project includes a written report and a final presentation. The report will be read by the BME MEng Program Advisor, the CEAS MEng advisor, and a representative from the Office of the Associate Dean for Research and Graduate Studies, any of whom may require changes before approval. If the project is performed in conjunction with work duties, the report and presentation should also be given to the student’s employer.
- **Internship** – Students can choose to perform an internship if this furthers their learning and career goals. Internships comprise employment related to biomedical engineering practice. Placement in internships is not guaranteed; identification of an employer is the student’s responsibility. Students are encouraged to contact the director of the CEAS MEng Internship Program for help with identifying and applying for internship opportunities.

Students selecting this option will also prepare a report, to be approved by the BME MEng Program advisor and the CEAS MEng advisor, that describes knowledge gained through the work experience and how this furthered their career goals. Internships will be approved for 3 to 6 months and can be extended for an additional 3 months with approval of the BME MEng Program advisor. Additional documentation is needed for the extension if requested. International students can be approved for Curricular Practical Training (CPT) to participate in an internship. Students cannot apply for CPT until two semesters of study are completed. CPT can only be provided prior to graduation, and terminates upon graduation. Six (6) months is the maximum duration for which CPT will be approved.

- **Paper** – A written paper can be completed under the supervision of the student’s capstone advisor and must be approved by the BME MEng Program advisor. The paper will address a topic related to the discipline (focus area) and requires the integration of multiple topics within that discipline. These papers should have a substantial technical content and address a topic area with significant analysis and technical rigor. Simple literature review papers are not deemed acceptable.
- **Capstone Project Planning:**
 - In Fall semester of their first year, students should begin planning of their capstone project including the identification of a project topic and a supervisor for the capstone project, internship, or paper.
 - Students should register for their Capstone Project as a 3 to 6 credit-hour course in Spring semester of their first year, to start work on the project and either complete it for Spring

graduation, or alternately complete the project in the summer or Fall term if needed. If the capstone project is not completed in the Spring term, the student may receive a “P” (pass) grade to fulfill UC grading requirements; however, the student’s graduation will not be certified until the Capstone Project has been approved by the BME MEng Program advisor and the CEAS MEng advisor.

A detailed summary of MEng Curricular Requirements is provided in Table 1 below, which also shows how the CEAS MEng curriculum structure can be mapped to the BME curriculum.

Table 1. A typical plan for a full time BME MEng student.

Type of Course	Fall Semester	Spring Semester	Comments/Clarification
MEng Core Courses	Core Course #1	Core Course #2	These should be picked from the MEng Curriculum Courses section of this handbook.
BME MEng Track Courses ¹	Track Course #1 Track Course #2	Track Course #3 Track Course #4	These should be picked from the BME-MEng Curriculum Courses section of this handbook
MEng Elective Courses ²	Elective #1 Elective #2	Elective #3	These can come from any graduate level engineering, science, medicine, business, or law course that is relevant to the student’s career goals as determined via discussion with the Graduate Program MEng advisor, and approved accordingly by the advisor.
MEng Capstone Project		Capstone Project	See section above on BME Capstone Requirement
Total Minimum Credit Hours per semester	15	15	N/A

¹Discipline-specific course

²Selected from Engineering Courses based on approval by BME MEng advisor

Minimum Academic Performance

The MEng Graduate Handbook of the UC College of Engineering and Applied Science (Master of Engineering handbook) states that a student must maintain a grade point average (GPA) of at least 3.0 to obtain a Master of Engineering degree at the University of Cincinnati. In addition, at least two-thirds of the minimum graduate credits for the degree must be at the level of 3.0 or higher.

The Biomedical Engineering program has also established the following requirements:

An MEng student must achieve an overall average of B on all graduate coursework. A student in the BME program failing to maintain this B average will be placed on probation for one semester and may be dismissed if his/her overall technical coursework GPA is not restored to a 3.0.

If coursework is repeated, all grades of a repeated course count toward these GPA requirements, but only one instance of the course counts toward the student’s curriculum requirements.

The Graduate Program Director will review graduate students’ grades once they become available after the end of each semester. All graduate students with grade deficiencies will be notified by the Director and reminded of the above requirements. A notice of probation will follow if GPA Falls below the minimum (3.0). Students will have one semester to comply with the terms of probation. If not corrected, a letter of dismissal will be sent.

Please note that remaining in good academic standing (3.0) does not guarantee financial support.

Time Limitations

A minimum requirement for the master of engineering degree is the equivalent of one academic year of full-time graduate study, consisting of at least 30 graduate credits in one program completed to the satisfaction of the program. All MEng requirements must be completed no later than five years from the date of first registration in the degree program.

Other Issues

For other MEng-related issues, please refer to the CEAS MEng Graduate Student Handbook, available from the page: [Master of Engineering handbook](#).

If there is any apparent discrepancy between these two handbooks, BME students should follow the BME graduate handbook, but should also notify the BME Graduate Director and MEng Advisor so that any discrepancies can be resolved.

Chapter Five Master of Science (MS) Degree Program

The BME program offers courses of study leading to the Master of Science Degree in Biomedical Engineering. The research focus areas include:

Medical Imaging
Medical Device Innovation and Entrepreneurship
Tissue Engineering/Biomechanics/Regenerative Medicine

Master of Science Curricular Requirements:

Course	Semester Credit Hours
Core BME Courses	6
Primary BME Focus Area	6
General Medical Sciences	3
Mathematics	3
Approved Technical Electives	3
Thesis Research	9
Total Graduate Credit Hours	30

Courses taken at institutes under the quarter system will be counted toward the above curriculum requirements at a rate of 1.5 quarter hours per semester hour.

After credit hour requirements for one of the specific categories above (core BME courses, focus area courses, general medical sciences, or mathematics) have been met, additional course credit hours from the completed category may be counted toward the approved technical electives requirement. Any substituted courses for any of the curricular requirements must petition to Graduate Program Director for approval.

The individual curriculum outline (list of courses) for each focus area can be found at the end of this Handbook.

Minimum Academic Performance

The Graduate Handbook of the Graduate School ([Graduate School graduate handbook](#)) states that a student must maintain a grade point average (GPA) of at least 3.0 to obtain a Master's degree at the University of Cincinnati. In addition, at least two-thirds of the minimum graduate credit hours for the degree must be at the level of 3.0 or higher.

The Biomedical Engineering program has also established the following requirements:

An MS student must achieve an overall average GPA of 3.0 on all graduate coursework. A student in the BME program failing to maintain a 3.0 GPA will be placed on academic probation for one semester and may be dismissed if his/her overall technical coursework GPA is not restored to a level above 3.0.

If coursework is repeated, all grades of a repeated course count toward these GPA requirements, but only one instance of the course counts toward the student's curricular requirements. Typically, a course is repeated only if a student failed the first attempt, in which case the grade received after the second attempt (assuming a passing grade) will be the instance counted toward the curricular requirements.

The Graduate Program Director will review graduate students' grades once they become available after the end of each semester. All graduate students with grade deficiencies will be notified by the Director and reminded of the above requirements. A notice of probation will follow if GPA falls below 3.0. Students will have one semester to comply with the terms of probation. If not corrected, a letter of dismissal will be sent.

Please note that remaining in good academic standing does not guarantee financial support.

Time Limitations

A minimum requirement for the MS degree is the equivalent of one academic year of full-time graduate study, consisting of at least 30 graduate credits in one program completed to the satisfaction of the program. All MS requirements must be completed no later than five years from the date of first registration in the degree program.

Research Projects, Thesis preparation and defense

1. Thesis Research Projects

A student will select a research advisor and a Research Advisory Committee (RAC). This committee has a minimum of three members and normally consists of the research advisor (BME primary or secondary faculty) and at least two other appropriate representatives. At least two members of the RAC must belong to the BME Graduate Faculty. The student will then select a research project in consultation with the research advisor and with approval from his/her RAC. The advisor and the RAC have the responsibility to see that the project is carried out under currently accepted scientific standards. Upon completion of the research, the student's Master of Science thesis will be prepared and defended orally in public.

2. Thesis Preparation

The Office of the Division of Graduate Education and Research provides graduate degree candidates with detailed information online concerning the written form of the thesis and requirements for preparing the final draft and abstract. Information regarding binding a thesis is available online. Further information on thesis preparation is available at the site [Electronic Thesis Dissertation FAQ page](#). Other graduation documents required by the Graduate School are available on the student's graduation checklist.

It is the responsibility of the student to ensure that he/she is in compliance with these regulations.

A student must submit his/her thesis to the RAC and notify the BME Graduate Program Coordinator no later than two weeks prior to the oral defense.

3. Thesis Defense

Prior to graduation, the thesis student will give an oral defense, which is opened to the public. In this defense, the student will give a 30 to 45 minutes presentation of his/her thesis to the RAC. After the thesis presentation, the student will be questioned by the committee on both the thesis, and the subject matter related to the thesis topic. The committee will then meet in private and vote to reach a pass/fail decision. For the student to pass the defense, each member of the Advisory Committee must concur, as affirmed by signing the CEAS "Record of Oral Defense" form.

PDF forms documenting the defense must be submitted by the student to the CEAS Graduate Studies Office (665 Baldwin), and are available at the site: [CEAS student forms portal](#). Scroll down the page to CEAS Thesis Defense Form.

Before approving the student's thesis, any committee member may require revisions to the thesis document. Once approved, each committee member will sign the signature form page of the student's dissertation. The student is encouraged to meet with each committee member to be sure that all concerns are understood and resolved. It is the student's responsibility to allow sufficient time for any required revisions after the oral defense and before the deadline for Electronic Thesis/Dissertation submission in the student's desired semester of graduation.

If the defense is failed, the student may repeat the defense at a later date to be arranged through his/her Advisor. A second failure of the defense is disqualifying.

4. Publication Permissions

If you plan on including papers you have published in your dissertation, you should obtain permission from the publishers to reprint the articles, either in their entirety or in excerpted form. This will avoid plagiarism flags. Most publishers will be happy to allow you to include your published papers in your dissertation, but you must get permission beforehand. It is also a good idea to preface each inclusion in your dissertation with the phrase, "reprinted with permission from" and insert the name of the publisher.

Graduation

There are also applicable College of Engineering and Applied Science graduation requirements and Graduate School requirements. Please refer to both to ensure that you meet all requirements.

CEAS: [CEAS graduate student graduation requirements](#)

Graduate School: [Graduate School graduation requirements](#)

Graduation Deadlines

You must meet the following two University deadlines in order to graduate: the application to graduate deadline and the Electronic Thesis/Dissertation (ETD: [Electronic Thesis/Dissertation submission information](#)) submission deadline. Failure to do so will delay your graduation to the next semester. The deadlines are firm. The Graduate School does not make exceptions to their deadlines.

To allow sufficient time for review and approval, the final version of the thesis should be distributed to the Advisor and committee members at least two weeks before the ETD submission deadline for that semester.

Graduation deadlines set by the Graduate School for each semester are listed at the site: [Graduation deadlines](#).

Graduate School Checklist

Please refer to your graduation checklist from the UC Graduate School: [Graduation information](#).

Refer to the submission information listed above to meet deadlines.

Chapter Six Doctoral (PhD) Degree Program

Course of Study

The BME Program offers courses of study leading to the PhD degree in Biomedical Engineering. A prospective candidate for the doctorate follows a plan of full time study that ordinarily lasts three (3) years beyond a Master's Degree, or 4-5 years without a Master's degree.

- The first year of study is generally directed toward completing most of the course work in the major area of study.
- The second year of study is generally aimed toward completing all course work, passing the PhD Qualifying Examination, and initiating a dissertation research project.
- The third year and any subsequent years of study are generally focused on completing the PhD Dissertation Proposal and completing the dissertation.

The Dissertation Committee, together with the student, will prepare the student's program of study and submit it to the CEAS Graduate Studies Office for their information and review. The student and his/her committee will endeavor to draft a program with a central emphasis on a particular focus area within Biomedical Engineering, with mathematics and/or other appropriate fields of study in supporting roles.

An important function of the Dissertation Committee is to supervise the study program of the student. The student may request a meeting with the Dissertation Committee when there is an important academic matter to discuss.

A student is required to satisfactorily complete a minimum of ninety (90) semester credits beyond the Bachelor's degree and a minimum of sixty (60) semester credits beyond the Master's degree requirements, whichever is greater. Curricular requirements are summarized below.

<i>Course</i>	PhD <i>(post MS)</i> <i>Semester Credit Hours</i>	PhD <i>(Without MS)</i> <i>Semester Credit Hours</i>
Core BME Courses	3	9
Primary BME Focus Area	3	9
General Medical Sciences	3	6
Mathematics	3	6
Approved Technical Electives	3	6
Thesis Research	45	54
Total Graduate Credit Hours	60	90

Courses taken at institutes under the quarter system will be counted toward the above curriculum requirements at a rate of 1.5 quarter hours per semester hour. If approved by the BME Graduate Program Director, some courses taken by students who are in the MEng program can also be waived from PhD program requirements, with the exception of the credit hours accrued for the MEng Capstone project.

After credit hour requirements for one of the specific categories above (core BME courses, focus area courses, general medical sciences, or mathematics) have been met, additional course credit hours from the completed category may be counted toward the approved technical electives requirement. Any substituted courses for any of the curricular requirements must petition to Graduate Program Director for approval.

Students in the MD/PhD program may fulfill their credit requirements for General Medical Sciences and Approved Technical Electives from course credits earned in their first two years of study in the medical school portion of the MSTP program.

The individual curriculum outline (list of courses) for each focus area can be found at the end of this Handbook. The research focus areas include:

Medical Imaging
Medical Device Innovation and Entrepreneurship
Tissue Engineering Biomechanics/Regenerative Medicine

Minimum Academic Performance

The Graduate Handbook of the UC Graduate School ([Graduate School graduate handbook](#)) states that a doctoral student must maintain a grade point average (GPA) of at least 3.0 in all doctoral course work.

The BME program has established the following requirements: A doctoral student must achieve an overall average of B (GPA 3.0) on all graduate coursework. A 3.0 average or greater GPA is also required for coursework in the BME core courses and the primary focus area courses. If coursework is repeated, all grades of a repeated course count toward these GPA requirements.

A student in the BME Program failing to maintain this 3.0 GPA average will be placed on probation for one semester and may be dismissed if his/her overall technical coursework GPA is not restored to a 3.0.

Graduate students' grades will be reviewed by the Director once they become available after the end of each semester. All graduate students with grade deficiencies will be notified by the Director and reminded of the above requirements. A notice of probation will follow if the GPA falls below the minimum 3.0. Students will have one semester to comply with the terms of probation. If not corrected, a letter of dismissal will be sent.

Residency

The Graduate Handbook of the Graduate School ([Graduate School graduate handbook](#)) stipulates that all doctoral students must meet a residency requirement. Prior to admission to doctoral candidacy, all doctoral students must enroll in at least 10 graduate credit hours per semester for two out of three consecutive semesters of study (including summer). Exceptions to this policy must be submitted for approval to the Graduate Council.

Per CEAS rules, all students must enroll in at least 15 graduate credit hours in Fall and Spring semesters if receiving a University Graduate Scholarship, Graduate Assistantship, or other funding support.

PhD Qualifying Examination Guidelines

All doctoral students in the Biomedical Engineering program are required to pass a Qualifying Examination, in accordance with the rules and guidelines of this **Graduate Handbook**. In order to take the exam, a student must have at least a 3.00 overall GPA.

1. To pass the Qualifying exam, the following steps must be taken:

- I. Identify the problem
- II. Assemble a Qualifying Exam Committee
- III. Pass both written and oral exams

I. Identify the problem

The Ph.D. Qualifying Examination will consist of two parts (i) A written research proposal identifying an important problem and demonstrating knowledge of a broader area of research and (ii) An oral presentation to be given based upon the proposal. The objective and examination grading are based on the student's:

- (1) understanding of general engineering and biomedical engineering concepts and ability to apply these concepts in research and design.
- (2) ability to critically analyze an engineering problem
- (3) ability to organize and communicate a body of knowledge
- (4) ability to answer questions related to a defined body of knowledge

It is expected that the student should show a thorough understanding of underlying physical and mathematical concepts, and demonstrate the ability to successfully complete an original research dissertation.

Any BME graduate student, whether holding a MS degree or not, who has been admitted to the BME PhD program is a Doctoral student, and as such is required to pass the Ph.D. Qualifying Examination and is subject to the requirements of this Section.

II). Assemble a Qualifying Exam Committee

The Qualifying Committee should consist of at least three members, one of whom must be a BME Primary faculty member:

- Research Advisor (Primary or Secondary Faculty in BME)
- One BME Faculty (Primary or Secondary) outside the technical focus area of the research advisor
- One BME faculty (Primary or Secondary) in the research focus area
- Additional members (optional)

III) Pass both written and oral exams

For the written portion of the exam, an application to take the Ph.D. Qualifying Examination must be completed and returned to the graduate office no later than ten days before the published due date of the written examination. The seminar topic and reference material must be defined by the student and included on the application.

For the oral portion of the exam, a written seminar announcement must be distributed by the Graduate Program Coordinator to all members of the BME graduate faculty and all BME graduate students, stating the time and place of the presentation, at least two weeks before the scheduled date.

Failure to meet any of the requirements is justification for failure of the Ph.D. Qualifying Examination.

1) Written Portion

The written portion of the exam will consist of a 12-page (maximum) research proposal (similar to NIH R21 style—see below), double-spaced and 11 point Arial font with 1 inch margins. **It is of the utmost importance that the proposal be the product of only the student.** The content of the proposal should not be identical to current research performed by the student's advisor, and is not meant to be a proposal for the student's dissertation research.

A. Specific Aims

List the broad, long-term objectives and what the specific research proposed in this application is intended to accomplish, e.g., to test a stated hypothesis, create a novel design, solve a specific problem, or develop new technology. State concisely the goals of the proposed research and summarize the expected outcome(s), including the impact that the results of the proposed research will exert on the research field(s) involved. List succinctly the specific objectives of the research proposed, e.g., to test a stated hypothesis, create a novel design, solve a specific problem, challenge an existing paradigm or clinical practice, address a critical barrier to progress in the field, or develop new technology. **Two pages are recommended. (Excluded from the 12-page limit)**

B. Significance

- Explain the importance of the problem or critical barrier to progress in the field that the proposed project addresses.
- Explain how the proposed project will improve scientific knowledge, technical capability, and/or clinical practice in one or more broad fields.
- Describe how the concepts, methods, technologies, treatments, services, or preventative interventions that drive this field will be changed if the proposed aims are achieved.

Two to five pages are recommended.

C. Innovation

- Explain how the application challenges and seeks to shift current research or clinical practice paradigms.
- Describe any novel theoretical concepts, approaches or methodologies, instrumentation or interventions to be developed or used, and any advantage over existing methodologies, instrumentation, or interventions.
- Explain any refinements, improvements, or new applications of theoretical concepts, approaches or methodologies, instrumentation, or interventions.

About one half to one page is recommended.

D. Approach

- Describe the overall strategy, methodology, and analyses to be used to accomplish the specific aims of the project, include how the data will be collected, analyzed, and interpreted.
- Discuss potential problems, alternative strategies, and benchmarks for success anticipated to achieve the aims.
- If the project is in the early stages of development, describe any strategy to establish feasibility, and address the management of any high risk aspects of the proposed work.
- Point out any procedures, situations, or materials that may be hazardous to personnel and precautions to be exercised. A full discussion on the use of select agents should also be included.

Five to eight pages are recommended.

E. Bibliography

The written proposal should contain a minimum of 20 references. This part DOES NOT count toward the 12-page limit.

(Optional) Preliminary Studies

Preliminary studies pertinent to the application may be described to demonstrate feasibility of the proposed research, clarify the proposed methods, or illustrate capability of the investigator to pursue

the proposed project. Relevant previous published and unpublished results may be succinctly described. Inclusion of appropriate figures and tables is encouraged. This optional information may be included within any of the sections B-D and is counted toward the 12 page length limit.

Upon a student delivering his/her written proposal to the qualifying committee, committee members will begin to review it as if on an NIH study section. Each committee member will provide a pass/fail decision, although discussion amongst the committee members is allowed and recommended. The student must receive a majority approval to pass in order to schedule the oral exam.

If the student passes, he/she must take the oral exam before the end of the same academic semester. If the student fails, he/she must retake and pass both the written and oral exams by the end of the following semester. The advisor/committee chair should provide the student with the committee's comments regarding the written exam. The student is also encouraged to meet with the qualifying exam committee members individually to receive written and oral comments that can be used in preparation for the oral exam.

2) Oral Portion

The advisor and student should schedule the oral exam in consultation with the other qualifying exam committee members. In addition, the student must provide the oral exam (title, topic, date, time, and location) to the Graduate Program Coordinator at least two weeks before the oral exam. The oral exam presentation should be advertised so that all BME faculty and students can attend. All BME graduate students are strongly encouraged to attend oral exams in all focus areas.

At the oral exam, the student should present for 30-45 minutes and then answer questions from the audience. This will be followed by a closed discussion between the student and the exam committee, in which the committee may ask questions about the student's written proposal, as well as questions about any other aspects of Biomedical Engineering relevant to the student's focus area and research. The committee should then convene separately, make a decision to pass or fail the student and provide that decision to the student at the end of the examination. If the student passes the oral exam, the committee chair will notify the BME Graduate Program Director and Coordinator to enter into the student's record. A unanimous vote is required to pass the exam.

If the student fails the oral exam, the BME Program Director and Coordinator should also be notified and the student must then reschedule and pass the oral exam before the end of the following semester. *Those students who fail the oral exam a second time will be required to leave the doctoral program by the end of the academic year. Funding is not guaranteed during the period following failure of the qualifying exam.*

2. Time Requirements

The Ph.D. Qualifying Examination is to begin during the second year of the program and to be completed by the end of the first semester of the third year.

Phase One (by Friday of the 2rd week of the semester) – The Qualifying Exam Committee must be in place and the student must turn in the QE form (included at the end of this handbook) to the BME Graduate Program Director and Coordinator. This is notification to the Graduate Program Director indicating the student's intent to take the exam, the suggested topic area to be presented, and signatures of all committee members. The topic may be related to research performed by the student or in their advisor's laboratory.

Phase Two (by Friday of the 6th week of the semester) – The student must submit their written proposal to PhD Qualifying committee with a copy to the BME Graduate Director and Coordinator.

Phase Three (by Friday of the 8th week of the semester) – The Qualifying Committee Chair will provide their decision (pass or fail) about the written exam to the student and the BME Graduate Program Director and Coordinator. If the student passes, he/she will schedule an oral presentation. If the student fails, he/she will

receive a written critique and be permitted to resubmit the written portion of the qualifying exam by the next semester.

Phase Four (by the end of semester) – Deadline for student to successfully complete the oral examination related to the written proposal. A decision (pass or fail) must be provided by the Committee Chair to the student and the Graduate Program Director and Coordinator within one week after the examination.

3. Qualifying Exam Delay

A student wishing to depart from the time requirements above shall notify by petition the BME Graduate Director of his/her intentions. This **written petition**, detailing the reasons for the delay, should be approved **prior** to the scheduled phase of the qualifying exam.

4. Oral English Proficiency Exam

Students subject to TOEFL requirements (see Chapter 1, Application and Admission) are strongly urged to pass the Oral English Proficiency Test (OEPT) before taking the PhD Qualifying Examination because of the inherent language skills required for the oral portions of the exam. The OEPT typically is given only twice a year (August and March).

5. Change of focus area

If a student changes focus area of study, the Qualifying Examination does not need to be repeated.

Ph.D. Dissertation Proposal

1. Dissertation Advisor and Committee

Within 3 months after passing the qualifying exam, the student, in consultation with the Dissertation Advisor, should form an advisory committee that includes a minimum of four committee members (inclusive of the advisor). At least three committee members (including the advisor) must be primary or secondary graduate faculty of the BME program. One of the committee members must be outside the technical focus area of the research advisor.

2. PhD. Candidacy

All doctoral students in the Biomedical Engineering program who have passed the Ph.D. Qualifying Examination must have a Dissertation Proposal accepted before they can be admitted into candidacy in accordance with the rules and guidelines of the Division of Graduate Studies and Research as set forth in the UC Graduate Handbook: [Graduate School graduate handbook](#).

The purpose of the Dissertation Proposal is to ascertain the appropriateness of the student's proposed research to constitute a Doctoral Dissertation, as well as the student's ability to carry through with the proposed research. The following specific rules and regulations govern the Dissertation Proposal in the Biomedical Engineering graduate program.

3. The Ph.D. Dissertation Proposal

The Dissertation Proposal is a typed document (see guidelines below) detailing the student's proposed Dissertation Research. The student is required to present orally the Dissertation Proposal to his/her Dissertation Committee. The written Dissertation Proposal must be distributed by the student to the members of his/her Dissertation Committee at least two weeks prior to the oral presentation.

After the oral presentation, the Dissertation Committee shall evaluate the Dissertation Proposal and unanimously accept, or reject it. The evaluation criteria are:

- The scientific merits of the proposed research, in particular its originality and contribution to the state of the art in the discipline of the proposed research.
- The realism and reasonableness of the proposed research.
- The qualifications of the student to conduct the proposed research.

The result of this evaluation shall be documented by signed College of Engineering and Applied Science forms: [CEAS student forms portal](#).

The student's advisor will provide the student with a decision letter documenting the outcome of their Dissertation Proposal defense. If the student has failed, the letter should state what changes are needed before defense of a revised proposal. If the student has passed, the letter should confirm that the Dissertation Committee approves the proposed content of the student's dissertation, while listing any additional expectations for the final dissertation.

A student who has had a proposal rejected two times shall be asked to leave the BME doctoral program.

4. Dissertation Proposal Guidelines

The dissertation proposal should take place within 2 years of passing the qualifying exam. The **written portion** should be a 14 (maximum) page dissertation prospectus including the following items plus bibliography (the bibliography DOES NOT count toward the 14-page limit).

- Introduction (one-page abstract)
- short review of the literature
- preliminary results

- an outline of the proposed thesis
- a list of potential titles of papers that would come out of the dissertation work and the journals to which they would be submitted

The proposal should be presented orally to the student's dissertation committee as a slide presentation. The student should present for 30-45 minutes and then answer questions from the audience. This will be followed by a closed discussion between the student and the committee

Candidacy and Time Limitations

As stated in the Graduate Handbook of the Graduate School (<https://grad.uc.edu/fac-staff/handbook.html>), a doctoral student shall be admitted into candidacy when he/she has:

- Achieved and maintained a GPA of at least 3.0 in all doctoral course work
- Acceptance of dissertation proposal

At least 7 months prior to graduation, the student must have a Dissertation Proposal presented to and accepted by his/her Dissertation Committee. A completion of PhD Candidacy form must be submitted to the Graduate Program Director at that time. Forms are available on the CEAS website. CEAS student forms portal. (Note: The Graduate School does not track time to candidacy. However, students must complete their doctoral degree—including graduation—within nine consecutive academic years of the date of matriculation into the program.)

A student who changes dissertation advisor and/or Dissertation Committee must still satisfy the last of these time requirements.

Typical timeline:

Year 1 – Select Advisor

Year 2 – Take and Pass the Ph.D. Qualifying Exam

Year 3 – Assemble Dissertation Committee and Prepare Dissertation Proposal

Years 4-5 - Complete Research, write dissertation and defend dissertation

A student wishing to depart from the time requirements listed above shall notify, by petition, the Director of Graduate Studies of his/her intentions. This written petition, detailing the reasons for the departure, should be received and approved prior to the expiration of the time requirements for which departure is requested.

The student who has completed all requirements for candidacy will be officially admitted into candidacy when the advisory department fills out the proper candidacy form, **including the Dissertation Advisor and Committee form**, that can be found at: CEAS student forms portal.

After completing the forms and obtaining all required signatures, the forms are submitted to the Graduate Program Coordinator for inclusion in the student's official student record. The candidacy forms should be submitted within one month after acceptance of the dissertation proposal.

The doctoral degree will be granted for no less than the equivalent of three (3) years of full-time graduate study.

The maximum time limit for doctoral degree completion is nine (9) years (from the begin term up to and including graduation).

Candidacy for the doctorate automatically terminates after nine years. A student whose candidacy is due to expire may petition the Associate Dean of the Graduate School for an extension of time to attain his or her degree. A student whose candidacy has already expired (and, therefore, moved the student to inactive status) may petition the Associate Dean for a reinstatement into his or her program and extension of time

to degree. If reinstatement is approved, **the student will be readmitted to candidacy only after satisfying the formal candidacy examination requirements administered by the department.**

Registration and fee payment for at least one graduate credit hour in each academic year is required for each student if his/her candidacy is not to lapse.

Students who interrupt their graduate studies by withdrawing from the University, either officially or by failing to register for an entire academic year, will be held responsible for the graduate program requirements in force and published at the time they re-enter that program.

Dissertation and Defense

A student must submit his/her dissertation to the committee and notify the BME Graduate Program Director and Coordinator no later than two weeks prior to the final defense.

1. Final Defense of Dissertation

After completing the dissertation, the candidate will give an oral presentation of the dissertation to the Advisory Committee and any other interested (or appointed) members of the Graduate Faculty of the University in an open seminar. The seminar date and place will be given by the student to the BME graduate Program Coordinator for distribution at least two weeks before the final defense.

After the defense presentation and public discussion, the student's Dissertation Committee will discuss the student's dissertation and defense in private and vote to reach a pass/fail decision. For the student to pass the defense, each member of the Advisory Committee must concur, as affirmed by signing the CEAS "Record of Oral Defense" form.

Before approving the student's dissertation, any committee member may require revisions to the dissertation document. Once approved, each committee member will sign the signature form page of the student's dissertation. The student is encouraged to meet with each committee member to be sure that all concerns are understood and resolved. It is the student's responsibility to allow sufficient time for any required revisions after the oral defense and before the deadline for Electronic Thesis/Dissertation submission in the student's desired semester of graduation.

If the defense is failed, the student may repeat the defense at a later date to be arranged through his/her Advisor. A second failure of the defense is disqualifying.

2. Publication Permissions

If you plan on including papers you have published in your dissertation, you should obtain permission from the publishers to reprint the articles, either in their entirety or in excerpted form. This will avoid plagiarism flags. Most publishers will be happy to allow you to include your published papers in your dissertation, but you must get permission beforehand. It is also a good idea to preface each inclusion in your dissertation with the phrase, "reprinted with permission from" and insert the name of the publisher.

3. ETD information

The Graduate School provides graduate degree candidates with detailed information concerning the written form of the Dissertation and the mechanics of preparing the final draft and abstract. Regulations on the Electronic Thesis and Dissertation (ETD) can be found at: [Electronic Thesis/Dissertation information](#).

It is the responsibility of the student to ensure that he/she is in compliance with these regulations.

Graduation

There are both applicable College of Engineering and Applied Science graduation requirements and UC Graduate School requirements. Please refer to both to ensure that you meet all requirements.

CEAS: [CEAS graduate student graduation requirements](#)

Graduate School: [Graduate School graduation requirements](#)

Graduation Deadlines

You must meet the following two University deadlines in order to graduate: the deadline for applying for graduation and the Electronic Thesis/Dissertation (ETD) submission deadline. These deadlines are scheduled once per semester. Failure to do so will delay your graduation to the next semester.

To allow sufficient time for review and approval, the final version of the dissertation should be distributed to the Advisor and committee members at least two weeks before the ETD submission deadline for that semester.

Graduation deadlines set by the Graduate School for each semester are listed at the site: [Graduation deadlines](#).

Graduate School Checklist

Please refer to the graduation checklist provided by the UC Graduate School:

[Graduation checklist information](#). Refer to submission information listed above to meet deadlines.

Graduate Student Awards

The Biomedical Engineering Program annually presents awards to exceptional graduating PhD students. These awards, which include a cash prize and certificate, are decided by the BME Graduate Committee based on letters of nomination from students' advisors and students' accomplishments during their graduate studies, as described in their curriculum vitae.

Appendix

List of BME Primary and Secondary/Graduate Faculty

Annual Review Form (to be completed in May annually)

Qualifying Exam Form (to be completed at time of qualifying exam)

Independent Study Form (to be used when taking an independent study course)

Curricula for focus areas

See below for a list of BME Primary and Secondary/Graduate Faculty. An updated list can be obtained from the Graduate Program Director.

Primary Faculty:

Medical Imaging

Jing-Huei Lee, Ph.D.
T. Douglas Mast, Ph.D.

Medical Device

Peter Campbell, Ph.D.
Mary Beth Privitera, M.Des., Ph.D.
Angela Boronyak, Ph.D.

Tissue Engineering

Riccardo Barrile, Ph.D.
John Martin, Ph.D.
Daria Narmoneva, Ph.D.
Jason Shearn, Ph.D.
Stacey Schutte, Ph.D.

Secondary/Graduate Faculty:

Bioinformatics

Jarek Meller, Ph.D.
Marepalli Rao, Ph.D.

Medical Imaging

Suzanne Boyce, PhD.
Zackary Cleveland, Ph.D.
Charles Dumoulin, Ph.D.
Kevin Haworth, Ph.D.
Lili He, Ph.D.
Christy K. Holland, Ph.D.
Yoonjee Park, Ph.D.
Xiaoyang Qi, Ph.D.
Laura Walkup, Ph.D.

Medical Device and others

Michael Archdeacon, M.D.
Chong H. Ahn, Ph.D.
Leyla Esfandiari, Ph.D.
Ephraim Gutmark, Ph.D.
Jason Heikenfeld, Ph.D.
Liran Oren, Ph.D.
Andrew Steckl, Ph.D.
David Wendell, Ph.D.

Tissue Engineering/Biomechanics

Rupak Banerjee, Ph.D.
Amit Bhattacharya, Ph.D.
Steve Boyce, Ph.D.
Greg Harris, Ph.D.
Rulang Jiang, Ph.D.
Winston W-Y Kao, PhD
Andrei Kogan, Ph.D.

Anant Kukreti, Ph.D.
Chia-Ying Lin, Ph.D.
Gui-Rong Liu, Ph.D.
Yaping Liu, Ph.D.
Phillip Owens, Ph.D.
Sarah Pixley, Ph.D.
Patrick Whitlock, M.D., Ph.D.
Debora Sinner, Ph.D.
Assem Ziady, Ph.D.

BME Graduate Student Annual Progress Review

Graduate Program: MEng M.S Ph.D.

Student Name: _____

Advanced Numerical Analysis (MATH 8010)	3	S
Applied Math Methods (MATH 8012)	3	F
Machine Learning (CS 6037)	3	F
Intro to Medical Informatics (CS 7053)	3	F
Advanced Topics in Mining Spatial and Temporal Data (CS 7051)	3	S
Introduction to Bioinformatics (CS 7099)	3-5	S

Course Title	# Cr Hrs	Semester
Biostatistics in Research (BME 7061)	3	S
Computational Fluid Dynamics (EGFD 6037C)	3	S
Data Science for Biomedical Research (CS 7054)	3	S
Introduction to Data Science (BE 7082)	3	F (every other year)
Total Math Required (MS, PhD post-MS, PhD alone)	3, 3, 6	

BME Approved Technical Electives

Course Title	# Cr Hrs	Semester
Management of Innovation (MGMT 7035)	3	S
Entrepreneurship and Technology Law (AEEM 6067)	3	S
Nondestructive Testing (AEEM 7027)	3	F
Biomedical Microsystems (AEEM 6007)	3	F
Fundamental of MEMS (EECS 6008)	3	S
Biomicrofluidic Systems (EECE 6078C)	4	S
Biochips and Lab-on-a-Chips (EECS 7026)	3	S (odd years)
Biosensors and Bioelectronics (EECE 7032)	3	S
Viscous Flow and Heat Transfer (EGFD 7041)	3	F
Experimental Techniques in Fluid Mechanics (MECH 6045)	3	S
Applied Fast Fourier Transforms (MECH 6060)	3	F
Acoustics (MECH 6066)	3	F
Nondestructive Testing (AEEM 7027)	3	F
Finite Element Method AEEM 7052)	3	S
Aeroacoustics I (AEEM 7065)	3	F
Human Physiology & Biomechanics (BIOL 6093C)	4	S
Advanced Strength of Materials (AEEM 6001)	3	F
Biomedical Microsystems (EECE 6007)	3	F
Digital Image Processing (EECE 6042)	3	F, S
Total Tech Electives Required (MS, PhD post-MS, PhD alone)	3, 3, 6	

In addition to the above courses, technical electives can come from any graduate level engineering, science, medicine, business, or law course that is relevant to the student's career goals as determined via discussion with and approved accordingly by the student's research advisor. All elective choices, if not listed above, need approval of the BME Graduate Program Director.

Medical Device Innovation and Entrepreneurship Curriculum

Primary BME Focus Area Courses – Medical Device Innovation and Entrepreneurship

Course Title	# Cr Hrs	Semester
Biomedical Signal and Image Processing (BME 6012)	3	F
Functional Tissue Engineering (BME 6030)	3	S
Tissue Biomechanics (BME 7021)	3	F
Medical Device Life Cycle Engineering and Management (BME 7010)	3	F
Biomechanical Design of Implantable Devices (BME 7011)	3	F
Advanced Medical Device Design I (BME 7020C)	3	S
Leadership and Organizations (MGMT 7014)	2	S
Entrepreneurship: New Venture Creation (ENTR 7005)	3	F,S
StartupUC (ENTR 7082)	3	F,S
Management of Innovation (MGMT 7035)	3	S
Biomedical Microsystems (EECE 6007)	3	F
Fundamentals of MEMS (EECE 6008)	3	F
The Microfabrication of Semiconductor Devices (EECE 6018)	3	F
Biomicrofluidic Systems (EECE 6078C)	4	S
BioSensors and Bioelectronics (EECE 7032)	3	S (even years)
Electrical Engineering of the Human Body (EECE 8025)	3	S
Humans, Machines, Robots and their Interactions (EECE 8115C)	3	S

Medical Imaging Curriculum

Primary BME Focus Area Courses – Medical Imaging

Course Title	# Cr Hrs	Semester
MR Imaging and Spectroscopy (BME 6011)	3	F
Biomedical Signal and Image Processing (BME 6012)	3	F
Biomedical Ultrasound (BME 6050)	3	S
Advanced Topics in Magnetic Resonance Imaging (BME 7012)	3	NO
Independent Study in Medical Imaging (BME 8010)	3	F,S,U
Introduction to Digital Signal Processing (EECE 6024)	3	F
Digital Image Processing (EECE 6042)	3	F,S
Deep Learning Applications in Image Processing (EECE 8042)	3	S
Diagnostic Radiological Imaging Physics I (MP 9050)	3	F
Diagnostic Radiological Imaging Physics II (MP 9051)	3	S
Total Focus Area Required (MS, PhD post-MS, PhD alone)	6, 3, 9	

Tissue Engineering/Biomechanics Curriculum

Primary BME Focus Area Courses – Tissue Engineering

Course Title	# Cr Hrs	Semester
Joint Biomechanics and Measurement Methods (BME 6024)	3	S
Functional Tissue Engineering (BME 6030)	3	S
Tissue Biomechanics (BME 7021)	3	F
Independent Study in Biomechanics (BME 8020)	3	F,S,U
Independent Study in Tissue Engineering (BME 8030)	3	F,S,U
Molecular and Cellular Biology (GNTD 7001)	3	F
Biomechanical and Physiological Aspects of Muscular Activity (OSE 7044C)	2	F
Total Focus Area Required (MS, PhD post-MS, PhD alone)	6, 3, 9	

MEng Curriculum Courses (For BME MEng Students Only)¹

BME MEng Core Courses (one course from each category)

Project/Task Management Development Courses (1 required)

Course Title	# Cr Hrs	Semester
Quality Control (MECH 6074)	3	F,S (online)
Entrepreneurship and Technology Law (AEEM 6067)	3	S
Engineering Project Management (ENGR 6014)	3	F,S
Product & Process Quality (ENGR 7025)	3	F
Systems Engineering Analysis (AEEM 6099)	3	S
Lean Six Sigma (ENGR 6025)	3	S
Engineering Data Management & Analysis (CVE 6079)	3	F
Occupational Safety Engineering (MECH 6050)	3	F
StartupUC (ENTR 7082)	3	F,S

Interpersonal Skill Development Courses (1 required)

Course Title	# Cr Hrs	Semester
Organizational Behavior for Technical Professional (ENGR 6003)	3	F,S
Effectiveness in Technical Organizations (ENGR 6010)	3	F,S (online)
Fundamentals of Leadership (ENGR 6050)	3	F,S
Leadership and Organizations (MGMT 7014)	2	F,S
Teams (OLHR 6050)	3	S
Individual Behavior in the Workplace (OLHR 8029)	2-3	F
Strategic Leadership for HR (OLHR 8090)	2-3	S
Innovation and Design Thinking (ENGR 6012)	3	F,S

BME MEng Track Courses (Need at least 12 credits total)

Tissue Engineering and Biomechanics Track Courses

Course Title	# Cr Hrs	Semester
Joint Biomechanics and Measurement Methods (BME 6024)	3	S
Functional Tissue Engineering (BME 6030)	3	S
Bioinstrumentation (BME 7002)	3	F
Tissue Biomechanics (BME 7021)	3	F
Independent Study in Biomechanics (BME 8020)	3	F,S,U
Independent Study in Tissue Engineering (BME 8030)	3	F,S,U
Molecular and Cellular Biology (GNTD 7001)	3	F
Biomechanical and Physiological Aspects of Muscular Activity (OSE 7044C)	2	F

¹ Note: Not all courses are taught every year. Students should use this curriculum sheet as a guide, and check Onestop prior to enrollment every semester to ensure that the course being considered is actually offered in that semester. This requires careful planning and students should start early to develop their program of study with the MEng program advisor.

Medical Imaging Track Courses

Course Title	# Cr Hrs	Semester
MR Imaging and Spectroscopy (BME 6011)	3	F
Biomedical Signal and Image Processing (BME 6012)	3	F
Biomedical Ultrasound (BME 6050)	3	S
Bioinstrumentation (BME 7002)	3	F
Advanced Topics in Magnetic Resonance Imaging (BME 7012)	3	S
Independent Study in Medical Imaging (BME 8010)	3	F,S,U
Diagnostic Radiological Imaging Physics I (MP 9050)	3	F
Diagnostic Radiological Imaging Physics II (MP 9051)	3	S

Medical Device Track Courses

Course Title	# Cr Hrs	Semester
Biomedical Signal and Image Processing (BME 6012)	3	F
Functional Tissue Engineering (BME 6030)	3	S
Tissue Biomechanics (BME 7021)	3	F
Medical Device Life Cycle Engineering and Management (BME 7010)	3	F
Biomechanical Design of Implantable Devices (BME 7011)	3	F
Advanced Medical Device Design I (BME 7020C)	3	S
Leadership and Organizations (MGMT 7014)	2	S
Entrepreneurship: New Venture Creation (ENTR 7005)	3	F,S
Management of Innovation (MGMT 7035)	3	S
Biomedical Microsystems (EECE 6007)	3	F
Fundamentals of MEMS (EECE 6008)	3	F
The Microfabrication of Semiconductor Devices (EECE 6018)	3	F
Biomicrofluidic Systems (EECE 6078C)	4	S
BioSensors and Bioelectronics (EECE 7032)	3	S (even years)
Electrical Engineering of the Human Body (EECE 8025)	3	S
Humans, Machines, Robots and the Interactions (EECE 8115C)	3	S

Core BME Graduate Courses

Course Title	# Cr Hrs	Semester
BME Survey (BME 7001)	3	F
Bioinstrumentation (BME 7002)	3	F
BME Career Building Blocks (BME 7003)	1	S
BME Research Design (BME 7005)	3	S

BME MEng Electives (6 credits required)**General Medical Sciences Courses**

Course Title	# Cr Hrs	Semester
Human Gross Anatomy (ANAT 8071C)	4-10	U
Scientific Integrity and Research Ethics (BE 7067)	1	U
Biology of Cancer (CB 8080)	3	S
Molecular and Cellular Biology (GNTD 7001)	3	F
Biochemistry and Cellular Signaling (GNTD 7002)	3	F
Human Physiology (MCP 6000)	4	F
Brain and Behavior I (NS 8041)	4-10	S
Brain and Behavior II (NS 8061)	4-10	F
Advanced Physiology and Pathophysiology (NURS 8022)	4	F
Ethics in Research (GNTD 7003)	1	S

Mathematics Courses

Course Title	# Cr Hrs	Semester
Biostatistics in Research (BME 7061)	3	F,S
Advanced Statistical Methods in Biomedical Research (BME 8064)	3	S
Introduction to Biostatistics (BE 7022)	3	F
Computational Fluid Dynamics (EGFD 6037C)	4	S
Numerical Analysis (MATH 6006)	3	F
Partial Differential Equations and Fourier Analysis (MATH 6007)	3	S
Applied Probability and Stochastic Processes (MATH 6008)	3	F
Mathematical Programming (MATH 6015)	3	S
Applied Ordinary Differential Equations (MATH 6051)	3	S
Scientific Computation (MATH 8011)	3	
Mathematical Physics (PHYS 7001)	4	F
Advanced Numerical Analysis (MATH 8010)	3	S
Applied Math Methods (MATH 8012)	3	F

Approved Technical Electives

Course Title	# Cr Hrs	Semester
Advanced Strength of Materials (AEEM 6001)	3	F
Elasticity I (AEEM 7001)	3	F
Elasticity II (AEEM 7002)	3	S
Nondestructive Testing (AEEM 7027)	3	F
Ultrasonic NDE (AEEM 7028)	3	S
Advanced Cell Biology (BIOL 6030)	3	F
Human Physiology and Biomechanics (BIOL 6093C)	4	S
Biomedical Microsystems (EECE 6007)	3	F
Digital Image Processing (EECE 6042)	3	F
Biomicrofluidic Systems (EECE 6078C)	4	S
Biochips and Lab-On-Chips (EECE 7026)	3	S
Biochemical Engineering (CHE 6023)	3	S
Bioseparations (CHE 6050)	3	S
BioSensors and Bioelectronics (EECE 7032)	3	F
Viscous Flow and Heat Transfer (EGFD 7041)	3	F

Course Title	# Cr Hrs	Semester
Turbulent Flows (EGFD 7042)	3	
Finite Element Techniques (EGFD 7052)	3	S
Advanced Finite Element Method (EGFD 7055)	3	
Introduction to Nuclear Engineering and Health Physics (MEC 6003)	3	F
Bio-Fluid Mechanics (MECH 6046)	3	
Applied Fast Fourier Transforms (MECH 6060)	3	F
Acoustics (MECH 6066)	3	F
Fundamentals of Biomechanics (MECH 6085)	3	
Advanced Biomechanics (MECH 6086)	3	
Solid Mechanics of Biological Materials (MECH 7056)	3	
Bio-Heat Transfer (MECH 7095)	3	F
Polymer and Biopolymer Engineering (METL 8001C)	3	F,S
